

The How and Why of Green Burials

Tuesday, January 24, 2023, 7:00–8:30pm

Haslett High School Viking Room

5450 Marsh Road, Haslett MI 48840

The presentation will also be available on Zoom -
register at <https://forms.gle/XxMe9RBSuauM5Q6A9>

Speaker: Gabriele Mayer

Join us to learn about the types and benefits of green (natural) burials, and how and where you can make that happen. A green burial could be a simpler, less expensive and environmentally friendly means to address the last event of one's life. **Wanda Bloomquist** will describe green burial options in Williamston.

Since 2015 cremation has surpassed traditional burial in the USA. Traditional burials usually require that the body is embalmed, and cemeteries require cement or metal vaults that surround the casket. And although cremations have a smaller impact on the environment, the process still requires considerable energy usage. Cremation and traditional burials are not the only choices that are available to consumers. In this program we will look at additional options such as human composting, natural burial and aquamation and compare their environmental impact. Green burial grounds in Michigan, including the one in Williamston, will be discussed.
